

Activity: Computer Forensics

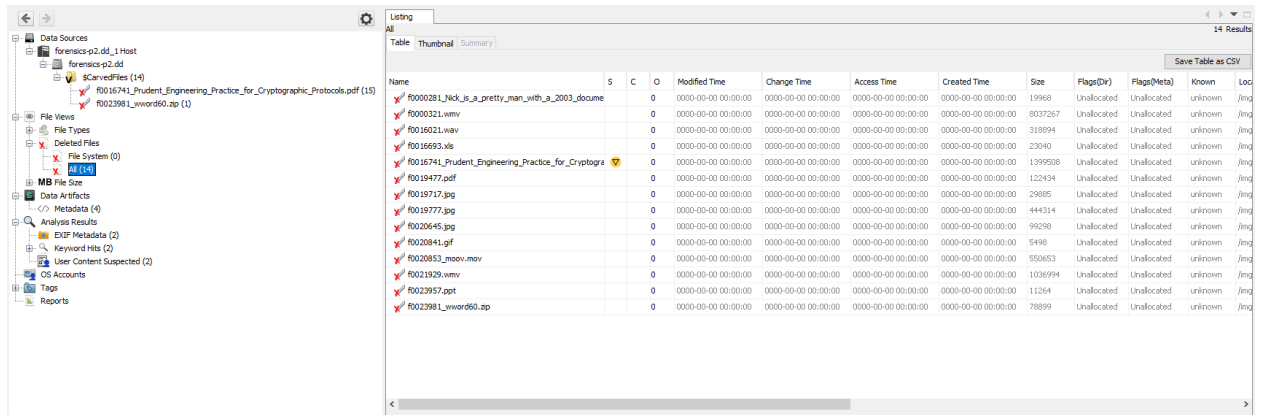

Part I. File Carving

1. Look at the data on the file system (Click on Data Sources and look at the hex values on the right). The file system has no files, but why are we able to find items on the disk image? Explain why the file system has no files but there are items that can be found on the disk image.

- The files or folders have been marked as unallocated space rather than removed by overwrite those space to “0” or null value when a user commanded to delete them. Still, the files’ content would have remained which could be found without pointer indicated, unless they have been overwritten yet.

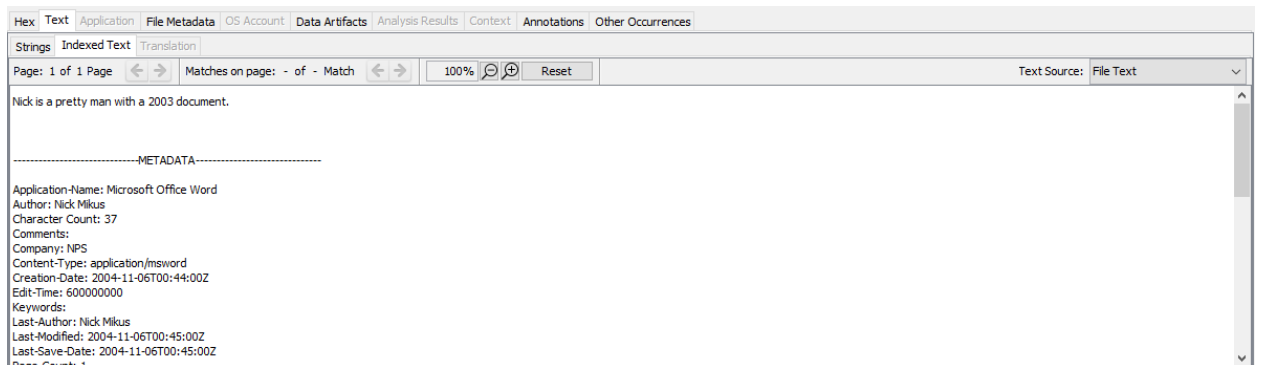

2. How many objects can you find?

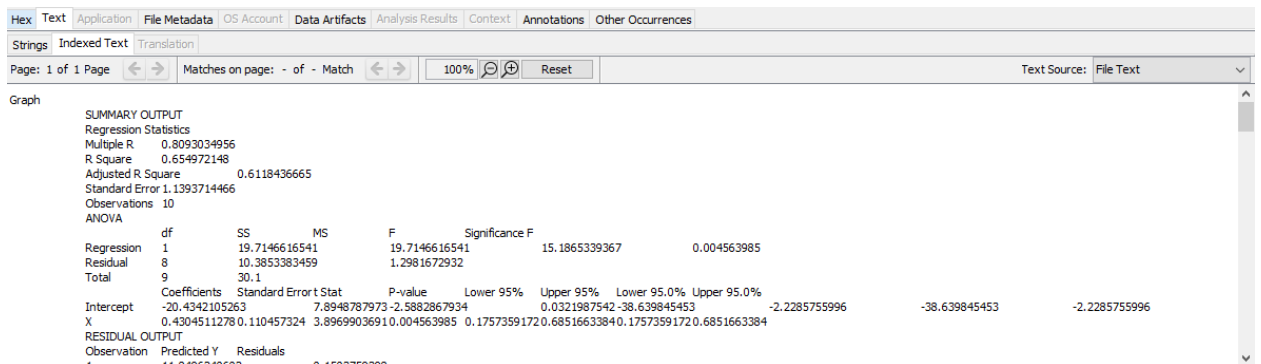

Name	S	C	O	Modified Time	Change Time	Access Time	Created Time	Size	Flags(Dr)	Flags(Meta)	Known	Loc

- As said in the document, there were totally 14 objects found deleted from the data source.

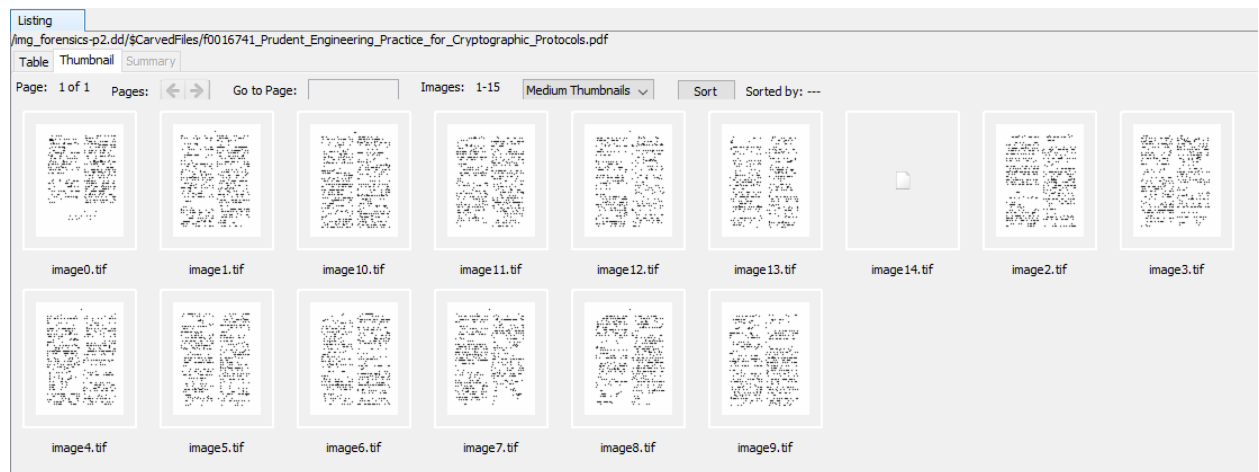

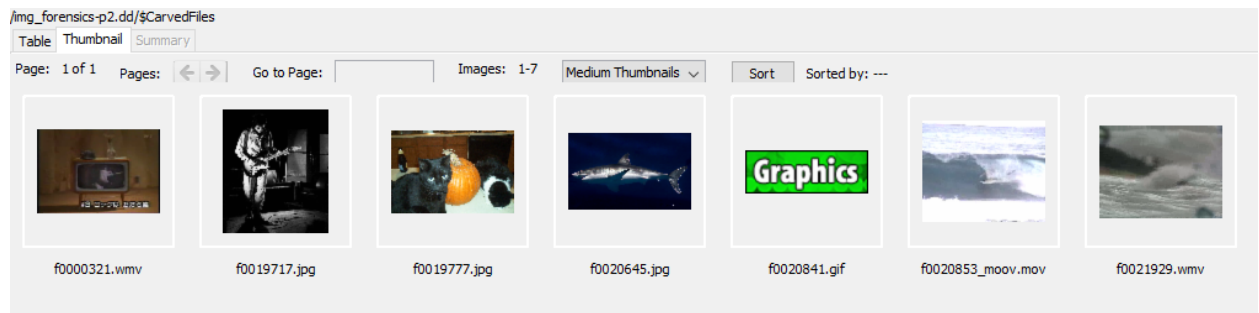

3. List all the objects here and report on whether or not the content is accessible or damaged/corrupted. Also note which files were actually already deleted.

- After access attempts, all 14 files were accessible, even though some was partly corrupted. The files were just unallocated their space, but not removed permanently.
4. Think securely: If we want to delete files on a magnetic hard disk and not have them be recovered by any tool, what do we need to do? And how much time do you think you need to wipe a 1TB magnetic hard disk?
- Easily done by overwriting 7 - 35 times on the space where those files were allocated with random bytes.
 - For 1TB magnetic hard disk with 100 MB/s writing speed, the files should be completely erased after randomly overwritten 35 times, as the US Government's official data erasure document issued. The 1TB hard disk should take $(35 \text{ times} * 1\text{TB} * 1024\text{GB}/1\text{TB} * 1024\text{MB}/1\text{GB} / 100 \text{ MB/s}) = 102 \text{ hours}$ approximately.
5. Will file carving be able to recover deleted files on an SSD? Why or why not?
- Despite of Trim command utilized on SSD, there is a significance process, named 'Garbage Collection', which keeps on deleting a block with invalid data whenever a

computer is idle. To clarify, the deleted files can be recovered if the Garbage Collection hasn't been activated yet.

Part II. Investigation

1. List all directories that were traversed in 'RM#2'.
